## **DETAILED ACTION**

## Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 8 is rejected under 35 U.S.C. 112, first paragraph, because the specification does not reasonably provide enablement for the imidazolin-5-one and amino acid amide composition recited in claim 1. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims.

In the instant case, there is no adequate direction provided by the applicant as to how to select the active compounds that can be successfully used in the synergistic composition and method invention.

Furthermore, the instant specification does not provide any working examples to point out how the 2-imidazolin-5-one and amino acid amide compounds may be used synergistically in the claimed antifungal methods and compositions.

Synergism is an <u>unexpected and highly unpredictable</u> effect. Applicant must demonstrate such an unexpected result for a representative number of compounds of the very broad genus herein (See MPEP 716.02(b)). Synergism should be demonstrated with evidence that the differences in results are in fact unexpected and unobvious and of both <u>statistical and practical</u> significance. *Ex parte Gelles*, 22 USPQ2d 1318, 1319 (Bd. Pat. App. & Inter. 1992). Moreover, evidence as to synergism (i.e.,

**Art Unit: 1617** 

unexpected benefits) must be "clear and convincing" *In re Lohr*, 137 USPQ 548 (CCPA 1963), and be of a scope reasonably commensurate with the scope of the subject matter claimed, *In re Linder*, 173 USPQ 356 (CCPA 1972). In the instant case, such evidence to demonstrate synergism is not present.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 7, 9, 14, 16, and 17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim 7 recites the broad recitation

**Art Unit: 1617** 

"fungicidal active material", and the claim also recites "iprodione" which is the narrower statement of the range/limitation.

In addition, claim 9 recites the broad recitation "between 10 and 0.01", and the claim also recites "between 5 and 0.5" which is the narrower statement of the range/limitation.

Furthermore, claims 16 and 17 recite the broad recitation "between 10 and 500g/ha", and the claim also recites "between 20 and 300g/ha" which is the narrower statement of the range/limitation.

The expression "curatively or preventively controlling" in claim 14 renders the claim indefinite because "cure" or "prevention" are absolutes denoting a complete absence of disease processes now and in future whereas "controlling" implies merely maintaining or reducing fungal numbers or reproduction. Therefore the intended method is not understood.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Latorse (WO96/03044 provided by the applicants in Paper 5 received May 17, 2001),

Art Unit: 1617

Shibata et al. (EP 0775 696 A1 provided by the applicants in Paper 5 received May 17, 2001), and Seitz et al. (EP 0472 996 A1 provided by the applicant in Paper 5 received May 17, 2001) in view of Budavari (Merck Index, 11<sup>th</sup> ed., 1989, monograph 4964, page 803).

Latorse teaches a composition and a method employing 2-imidazoline-5-one compounds including (4-S)-4-methyl-2-methylthio-4-phenyl-1-phenylamino-2-imidazoline-5-one useful as a fungicidal treatment for vegetables (See particularly the abstract, page 1, line 1 – page 3, line 21; also page 12, examples PM1 – PM5; page 17, example 1- page 31, example 28; also claims 1-14). Latorse also teaches the dosage of the 2-imidazoline-5-one compounds to be 10 to 5000g/ha (See claim 14).

Shibata et al. teaches a composition and a method employing valinamide-derivative compounds including N¹-[(R)-1-(6-fluoro-2-benzothiazolyl)ether]-N²-isopropoxy-carbonyl-L-valinamide useful as a fungicidal treatment for crops (See particularly abstract, page 3, line 22 – page 5, line 57; also compound No. 4 in page 18, first paragraph; page 21- page 28, examples 1-4). Shibata et al. also teaches the effective amount of the actives to be 0.1 to 5000g to treat 10 areas in liquid formulation (See page 20, line 28-36). Shibata et al. also teaches that the active compounds may be formulated into wettable powder, emusified liquids, or granules and that the active can be sprayed on the vegetables (see page 20, line 49 – page 21, line11: formulation Examples 1-4; also page 21, example 1).

Art Unit: 1617

Seitz et al. teaches a valinamide-derivatives including isopropyl[2-methyl=1=(1-phenylethylcarbamoyl)-propyl]carbamte useful to be a fungicidal compound (see particularly abstract, page 8, compound 3 and page 9, compound 13).

The references do not expressly teach the combination of the 2-imidazoline-5-one compounds and valinamide-derivative compounds together in a composition and method of fungicidal application. The references do not expressly teach employment of an additional fungicidal compound, iprodione, in the composition. The references do not expressly teach the ratio between the two active compounds. The references do not expressly teach dose of the two active compounds to be 10 to 500g/ha or 20 to 300g/ha.

Budavari teaches that iprodione is useful as fungicide (See page 803, col. 2, Use Section).

It would have been obvious for one of ordinary skill in the art at the time the invention was made to combine the 2-imidazoline-5-one compounds and valinamide-derivative compounds, and/or iprodione together with a dosage herein and ratio herein to form a fungicidal composition.

It would have been obvious for one of ordinary skill in the art at the time the invention was made to employ the combination fungicidal composition herein in a method to control the phytopathogenic fungi of crops.

One of ordinary skill in the art would have been motivated to combine the 2imidazoline-5-one compounds and valinamide-derivative compounds, and/or iprodione together with a dosage herein and ratio herein to form a fungicidal composition because

Art Unit: 1617

combining two or more agents which are known to be useful to be a fungicide individually into a single composition useful for the very same purpose is prima facie obvious. See *In re Kerkhoven* 205 USPQ 1069. Please note that in the instant case, 2-imidazoline-5-one compounds, valinamide-derivative compounds, and iprodione are known to be useful as fungicides individually. Therefore, they are expected to be useful together in a single fungicidal composition or method. Furthermore, The optimization of result effect parameters (dosage range, ratio of the active components) is obvious as being within the skill of the artisan.

One of ordinary skill in the art would have been motivated to employ the combination fungicidal composition herein in a method to control the phytopathogenic fungi of crops because the individual compounds are known to be useful in method of fungicidal application in plants or crops. Therefore combining these components together would have been reasonably expected to be useful in a method of doing the same. At least additive efficacy is expected. See *In re Kerkhoven* 205 USPQ 1069

Evidence as to unexpected benefits must be "clear and convincing" *In re Lohr*, 137 USPQ 548 (CCPA 1963), <u>and</u> be of a scope reasonably commensurate with the scope of the subject matter claimed, *In re Linder*, 173 USPQ 356 (CCPA 1972). The data provided by Applicants does not clearly and convincingly demonstrate synergism for any combination within the claims and is not reasonably commensurate in scope with the instant claims. For example, examples 1 to 4 in page 31 to 38 in the specification relate only to certain fungal species and the employment of 3 compounds useful from genus herein in a fungicidal combination in accordance with the claims (i.e.,

Art Unit: 1617

Page 8

compound A, B, and C in the specification). A supraadditive effect for the combinations of individual agents herein, based on raw data on the same individual agents in comparison to their corresponding combination, is not present. Furthermore, absent claims commensurate with a showing of any unexpected benefits, or a showing reasonably commensurate with the instant claims, such claims remain properly rejected under 35 USC 103.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to San-ming. Hui whose telephone number is (703) 305-1002. The examiner can normally be reached on Monday to Friday from 8:30 to 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Minna Moezie, J.D., can be reached on (703) 308-4612. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-4556 for regular communications and (703) 308-4556 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1235.
